

Nepal E-Commerce Sales Intelligence

Executive Report | September 2026

NPR 8.7M	1,200	NPR 7,256	4.1/5.0
Total Revenue	Total Orders	Avg Order Value	Customer Rating

Executive Summary

This report analyzes **1,200+ e-commerce transactions** across six major cities in Nepal to identify revenue drivers, customer purchasing behavior, seasonal trends, and payment preferences. The analysis provides actionable recommendations for revenue optimization, marketing efficiency, and inventory planning.

Key Findings

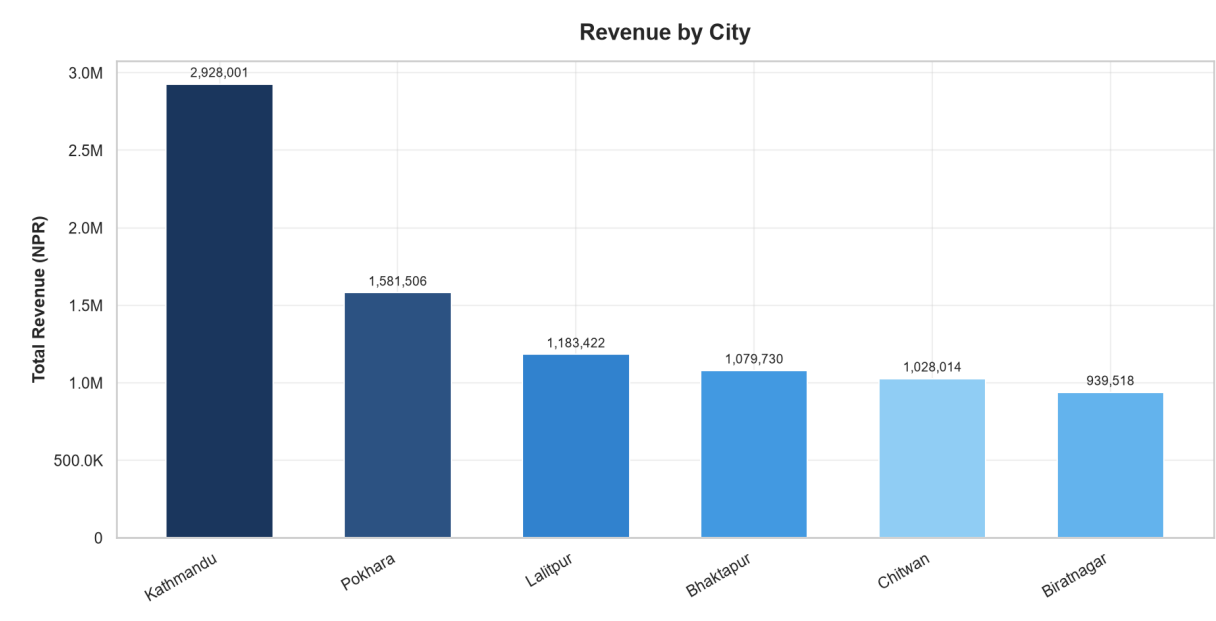

- Geographic:** Kathmandu generates 37% of total revenue (NPR 2.9M)
- Category:** Electronics dominates with highest average order value
- Payment:** Digital wallets (eSewa + Khalti) capture 65% of transactions
- Customer:** 25-34 age group is the largest and highest-spending segment
- Temporal:** Revenue peaks during festival seasons (Oct-Nov)

Gradient Boosting	0.974	191

Business Recommendations

Geographic Strategy

- Focus premium products in Kathmandu Valley
- Develop tier-2 city strategies for Pokhara, Biratnagar
- Expand delivery network to underserved areas

Category Optimization

- Increase inventory for Electronics, Home & Kitchen
- Create product bundles for lower-performing categories
- Run targeted campaigns for Groceries (volume-based)

Customer Targeting

- Create loyalty programs for 25-44 age group (highest value)
- Offer student discounts for 16-24 segment
- Develop personalized marketing for each age group

Payment Strategy

- Partner with eSewa/Khalti for exclusive offers
- Offer incentives for digital wallet adoption
- Promote bank transfer for high-value orders

Seasonal Planning

- Increase inventory 2-3 weeks before festival seasons
- Run counter-seasonal promotions during slow months
- Use ML predictions for demand forecasting

Next Steps

Deploy the Gradient Boosting model for monthly revenue forecasting. Create the Power BI dashboard for real-time monitoring. Implement A/B testing for payment incentives. Schedule quarterly review of model performance and business impact.
